CADI WV5533 Digital Iriscope

We are happy to report that we are now carrying the **CADI WV5533 Digital Iriscope**. If you're an iridology student or a professional looking to work with clients in an office or other environment, this may be the portable professional camera for you.

Only: $1,195!

What are some reasons you may choose this Iriscope?

1. Single handheld iriscope, Logitech CCD iris lens. Iris lens, 30X.
2. The iriscope connects to a PC or Laptop in the USB port without outside power.
3. Handset: Switch for left & right eye.
4. Instruction Warranty (English edition).
5. It's a great value and takes good images.
6. Portable dust-proof aluminum box.
7. Picture size (800 x 600, 960 x 720, 1600 x 1200, 2M, 4M, and 8M)
8. Easy to operate.
9. Iridology Station 5.1 iridology scanning software sold separately, $500.

Iriscope System Functions

1. This mode is good for enhanced detection of pupil deformations, ANW, and transversals.
2. The Focus dial is located on side of magnification adaptor instead of on top. The new location is much easier to access when focusing on iris images.
3. Light option to turn-on and turn-off right or left LED. This is good for blue eyes only, especially when observing heart sectors. Brown irises always require both lights left on.
4. Ability to adjust the focus to 1-3X, and save the photos according to the time you take them.
5. Ability to adjust the brightness automatically, delete the photos, adjust the focus, quick-fix photos with white balance, and high stability of color.
6. The iris analysis software allows you to enter client information and details of products after you take the photos. You can perform an analysis from the iris picture and print an analysis report.

Some sample images that this CADI can take are below:
