

CADI DM9988U Digital Iriscope

We are happy to report that we are now carrying the **CADI DM9988U Digital Iriscope**. If you're an iridology student just starting out or are just dabbling in iridology for the first time, this may be the camera for you.

Only: \$900!

What are some reasons you may choose this Iriscope?

1. The iriscope connects to a PC or Laptop in the USB port.
2. Handset: Switch for left & right eye. Switch for iris or skin. Switch for 3D Professional skin.
3. Iris lens 30X
4. Instruction Warranty (English edition).
5. It's a great value and takes good images.
6. Portable well-designed dust proof aluminum box.
7. Iris lens lid
8. Add polarized skin lens (50X) and hair lens (650x)

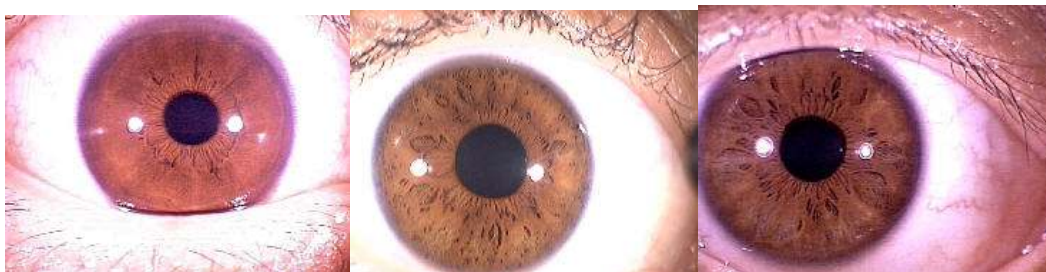

Iriscope System Functions

1. This mode is good for enhanced detection of pupil deformations, ANW, and transversals.
2. The Focus dial is located on side of magnification adaptor instead of on top. The new location is much easier to access when focusing on iris images.
3. Light option to turn-on and turn-off right or left LED. This is good for blue eyes only, especially when observing heart sectors. Brown irises always require both lights left on.
4. Ability to adjust the focus of 30X magnification adaptor to 1-3X, and save the photos according to the time you take them.
5. Add professional skin lens. See epidermis, corium, aging lines, even the dynamic condition of pores.

Iridology Station 5.1 scanning software sold separately.

Go to <http://www.joyfullivingservices.com/iridologystation5.1.html> for more information on the software that will work with this iriscope!

Some sample images that this CADI can take are below:
