

Welcome everyone!

Iris Photography

There are many iridology cameras, systems, and devices on the market. The key is the customer service behind the device.

Considerations:

1. Professional vs. Student Camera
2. Megapixels
3. Price
4. Customer Service
5. Reputation

1. Welcome Client
2. Show them where to sit
3. Have them sign the disclaimer
4. Go over the iridology chart
5. Take their iris and sclera photos
6. Download photos onto computer. Put in client folder with last name, first name, Eye position and date
7. Use iridology assessment software or forms to analyze the eyes
8. Use the 10x magnifying glass to look for markings if needed
