

# Insights into Multidimensional Iridology

IIPA Level III-by Dr. Daniele Lo Rito

# Topics

- **Miosis**
  - Character
  - Causes
  - Right sided
  - Left sided
- **Mydriasis**
  - Character
  - Causes
  - Right sided
  - Left sided
- **Hippus**
- **Anisocoria**
  - Causes
- **Pupil Border**
  - EGO
  - ES
  - OS
  - Super EGO
  - Religion
  - Cosmic Energy
  - Family
  - Pleasure

## Pupil size and its importance

- **Miosis - small pupil**
  - Parasympathetic innervated
  - Can lead to excess in food & drink
  - Digestive apparatus is stimulated
  - Nutrient uptake spiked
  - Success/social status
  - Sexual appetite
  - Peristalsis starts and stomach acid is produced quickly

**The pupil size is smaller than one third and it indicates a predominance of the parasympathetic nervous system.**

# Miosis-Character

- Interests:
  - Food
  - Economy
  - Security
  - Career
  - Status
  - Material things
- Can put their religious beliefs onto others
- Can seem very ON (forced)

# Miosis causes

---

- Cluster headaches common
- Horner's syndrome (nerve pathway disturbance, as in a stroke or tumor)
- Intracranial hemorrhage and brain stem stroke
- Iris inflammation (iritidocyclitis, uveitis)
- Lyme disease
- Neurosyphilis (disease of the brain or spinal cord)
- Multiple sclerosis (MS)
- Loss of the lens of the eye (**aphakia**) due to surgery or accident

# Right sided Miosis

## In women:

- Career woman with high ideals or goals
- Female with male attitude that will stand up for her rights

## In men:

- Will to stand up for himself and to be seen
- Attractive to others for his inner feminine side

# Left sided Miosis

---

## In Women:

- Need to express their male side
- Responsive to father figures (father, grandfather, uncles)

## In Men:

- Very manly (male force) but does not always want to show it
- Responsive to mother figures (grandmother, aunts)
- Can connect with their soul
- Observant of unconscious forces (feeling, thoughts, urges or memories)

# Mydriasis- Large Pupil

- Sympathetic innervation T1-L3
- Catabolic processes -(food to energy) slow
- No appetite
- Heart palpitation weakened
- Flee or fight mode

**The pupil is larger than one third its size. This is dominance of the sympathetic nervous system.**

## Mydriasis- character

- **Can't say no**
- **Open for larger scenes and purposes**
- **Takes care of other people's problems**
- **Changes everything to energy**
- **In a competitive world they get worried, insecure, scared or panic!**

# Mydriasis causes

---

## Caused by:

- Damage to 3<sup>rd</sup> cranial nerve
- Certain medications/drugs
- Plants
- Brain injury
- Oxytocin
- Cranial nerve neuropathy
- Eye trauma
- Concentration
- Client/patient may complain of headaches, dizziness, eye irritation or have trouble sleeping

# Right side Mydriasis

## In women:

- Dominant to the female aspect of the soul.
- Very sensitive
- Father issues
- Emotionally unstable
- Open for future problems

## In men:

- Has a feminine attitude
- Very sensitive
- Father issues
- Emotionally unstable
- Open for future problems

# Left side Mydriasis

## In Women:

---

- Shows their male side
- Can't stand the archetype woman (the mother, queen, sage)
- May have difficulty with mother or other females
- Remembers the past and can't let go of memories.

## In Men:

- Sensitive to unknown forces, memories, urges etc.
- Can't stand the archetype woman
- Unstable and volatile (extreme moods)
- Intuitive and clever but difficult showing it
- Strongly attracted by feminine forces

# Hippus- pulsating pupils

- Alternating Vagus- and sympathetic enervation
- Harmonic hippus where the pulse is even.
- Lives with full emotional involvement
  
- Unharmonic Hippus-
  - When the two different nervous systems compete to be dominant; Vagus nerve and SNS
  - Can suffer from bipolar disease.

# Hippus

# Hippus

- **Two types of Hippus-**
- **Harmonious-** where the movement is regular, rhythmic, and indicative of a strong emotionality.
- **Disharmonious-** irregular pupil movement. Dilation and contraction follow each other in a chaotic and irregular way.

# Anisocoria - different sized pupils

Miosis - under 2.5 mm, Mydriasis - over 6 mm.

Through an examination with a flashlight, we can see which eye is the "normal", so to distinguish if the other is in Miosis or Mydriasis and if it is caused by sympathetic or parasympathetic character.

We will now continue to the mental aspect that we can consider when an ophthalmologist has analyzed that there are no physical problems.

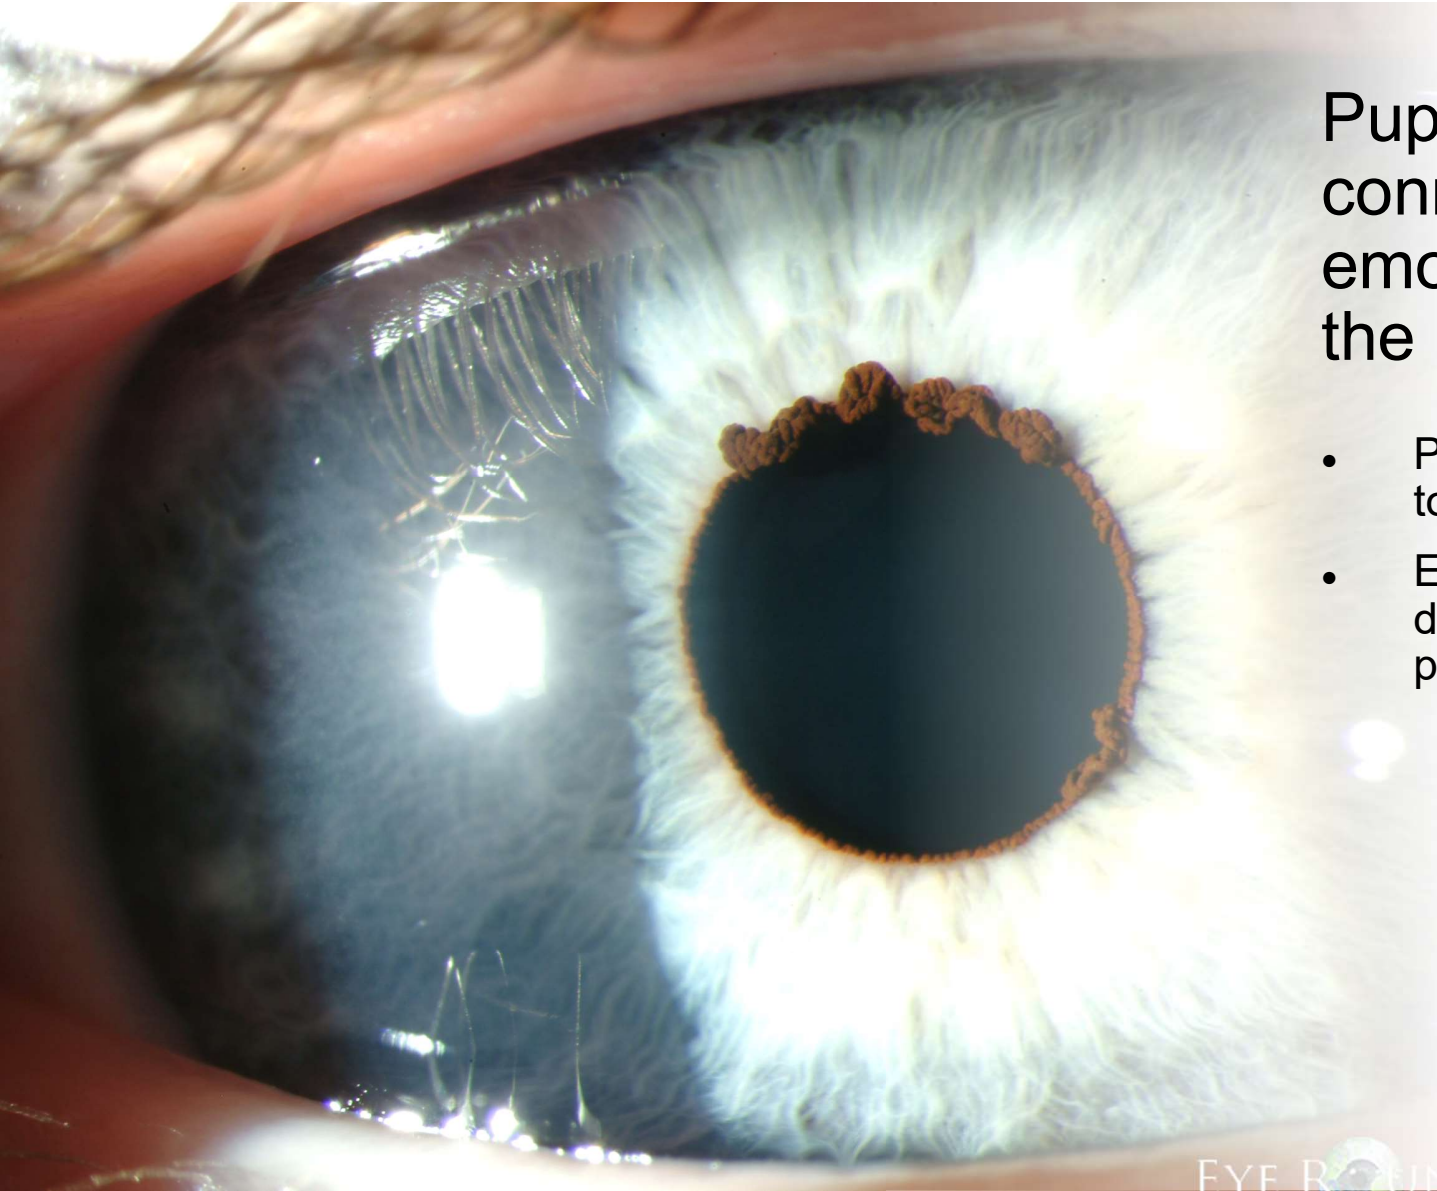

Anisocoria - different sized pupils

### **What causes anisocoria?**

- direct trauma to the eye- painful red eye, visual disorder
  - concussion.
  - bleeding in your skull.
- inflammation of your optic nerve.
  - brain tumor.
  - aneurysm.
  - meningitis.
  - seizure.

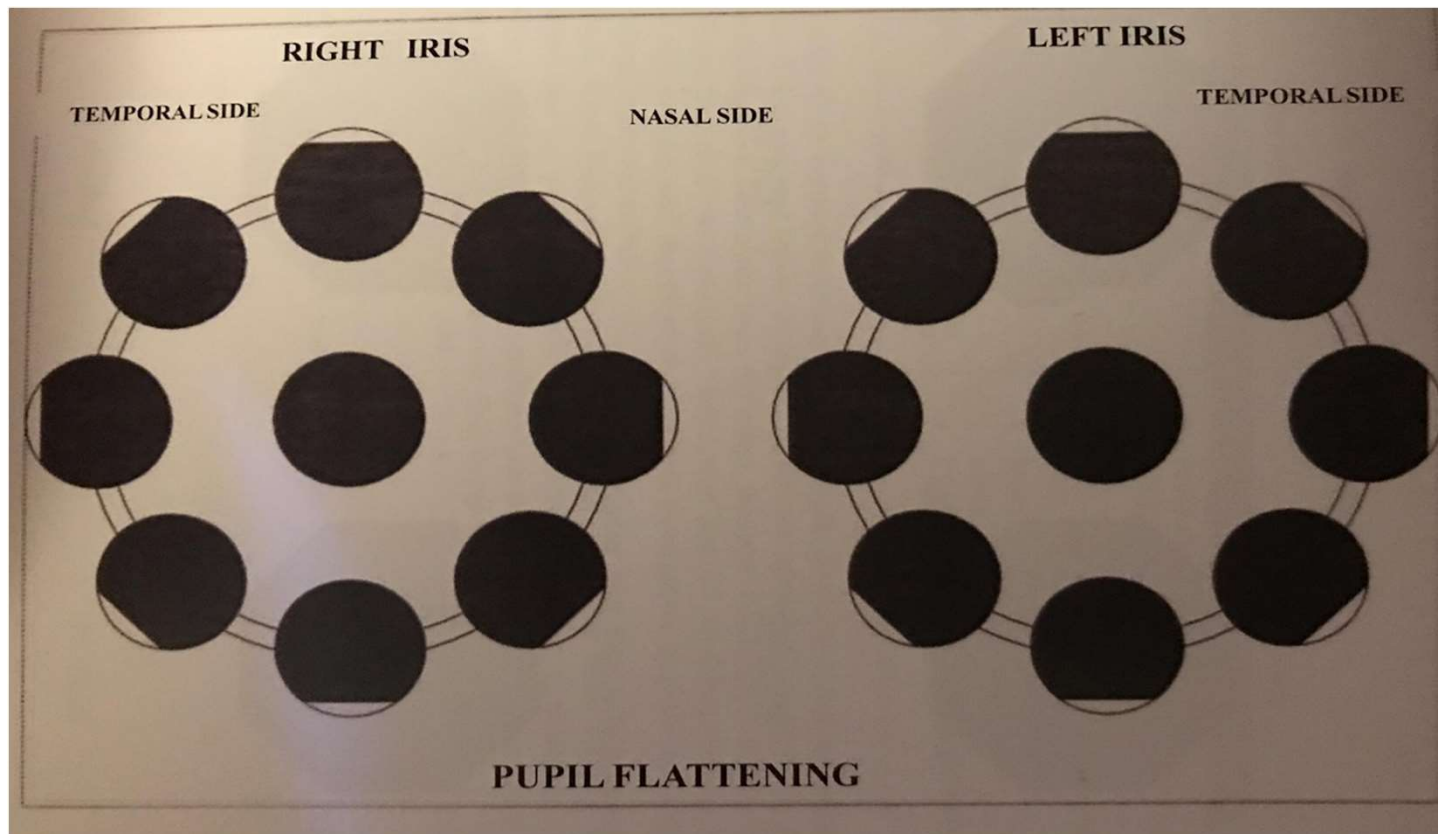

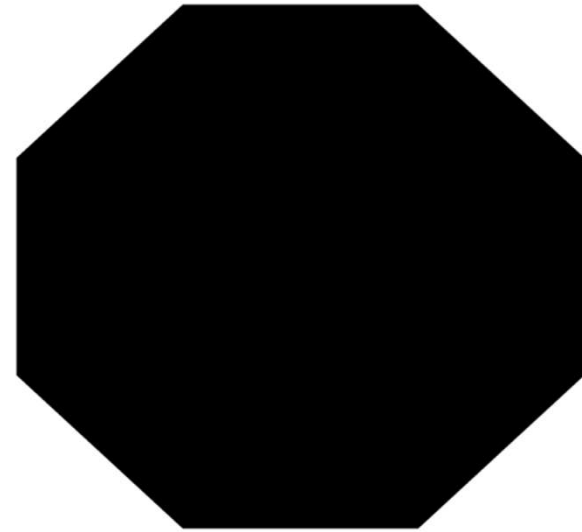

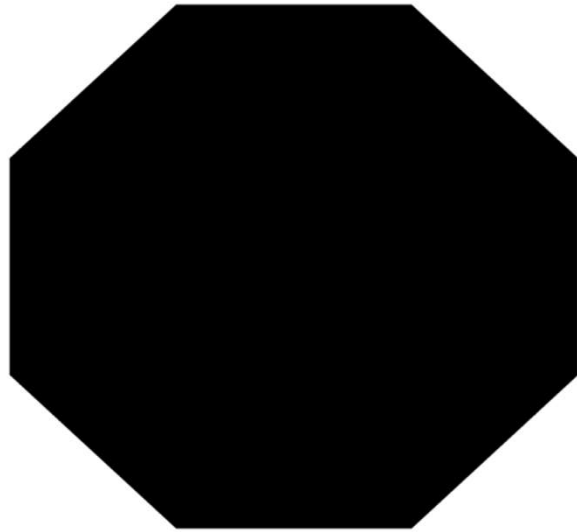

## Pupil border and it's connection to the emotional aspects of the human

- Physiologically connected to the spine
- Emotionally connected to different sides of the person

Map from Dr Lo Rito's book  
Multidimensional Iridology p.48.

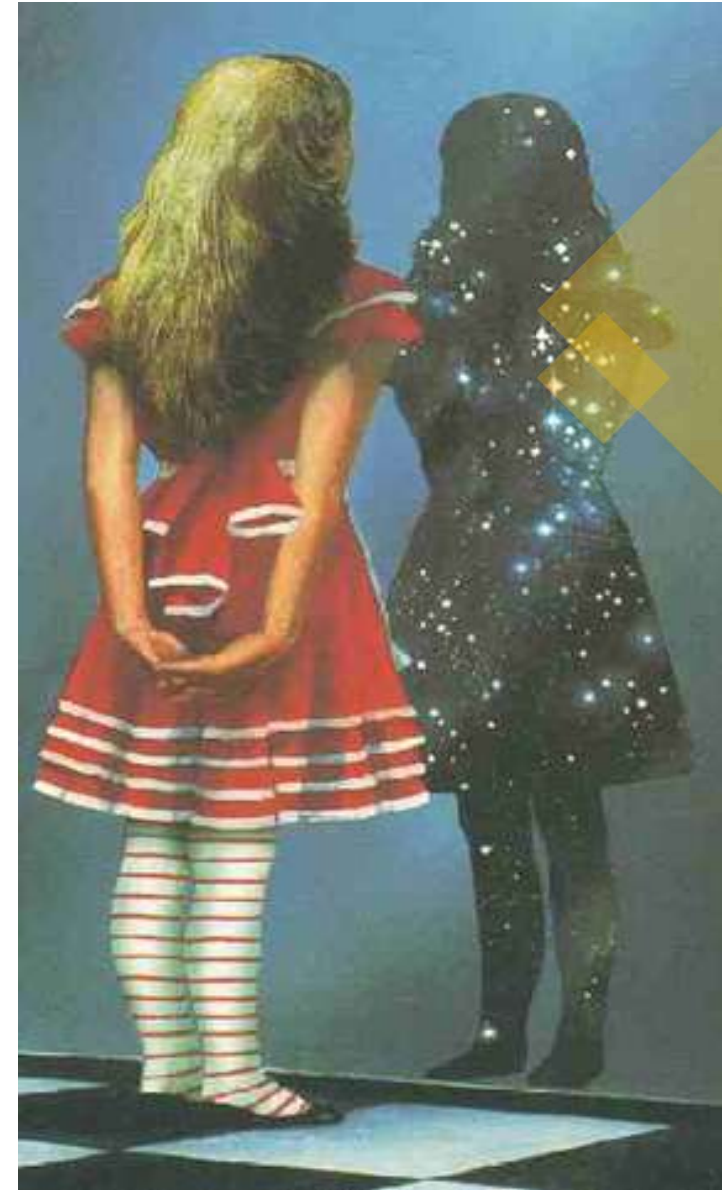

EGO

- Coordinates ciliary zone dx  $67,5^{\circ}$ - $112,5^{\circ}$  sin  $247,5^{\circ}$ - $292,5^{\circ}$ , also pupil deformation within these areas.
- Nasally located

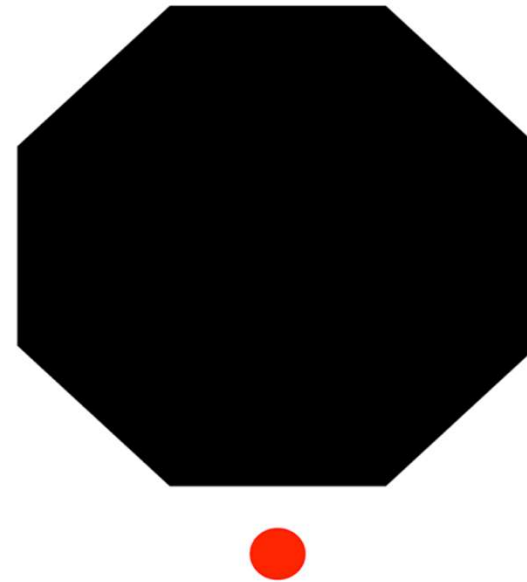

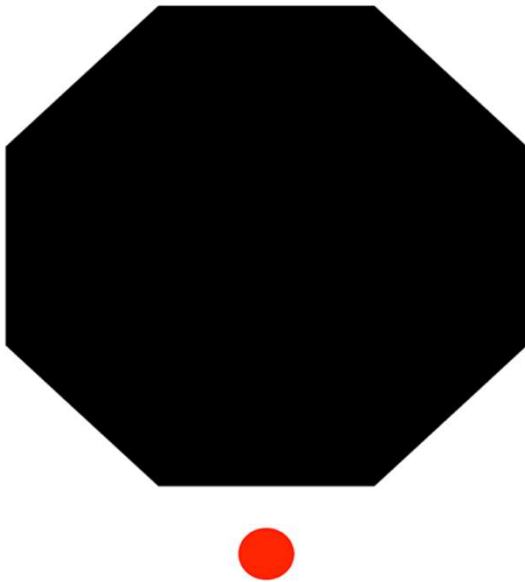

# EGO-character

- Inner strength
- Adaptability
- How we use our strengths
- How we fear using our strengths
- How we define ourselves
- How we take care of ourselves
  
- E.g., pigment in this area could suggest that the picture of oneself is blurred. Some qualities can be perceived but others cannot. We do not see ourselves fully,

ES

- Coordinates  $157,5^{\circ}$ - $202,5^{\circ}$  in both irises and pupil deformation
- Ventrally located

# ES-characteristics or ID-characteristics

## Instincts and drive

- Drive
- Instinct
- Born with fear
- Worry
- Restraints
- Duties/responsibilities
- Sexuality
- The unknown
- Freedom

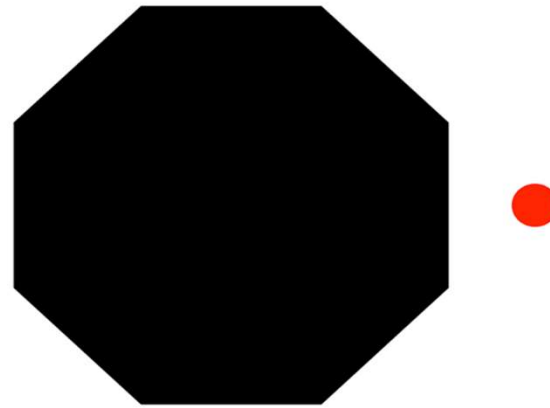

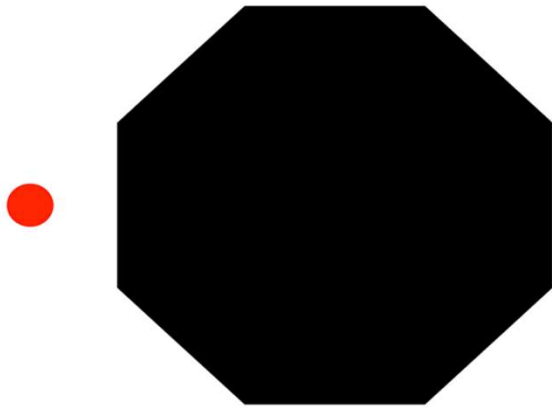

According to Harri Wolf:

In this area we can see if there has been a conflict with the parents as a child.

# OS

- Coordinates 247,5-292,5° 67,5-112,5°
- Temporally located

# Os-characteristics

Os-short for the Latin word Osare- to dare

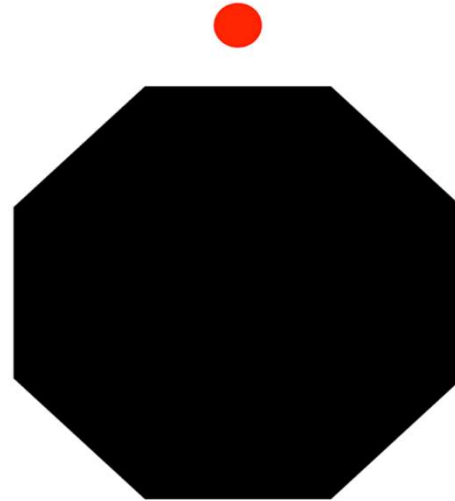

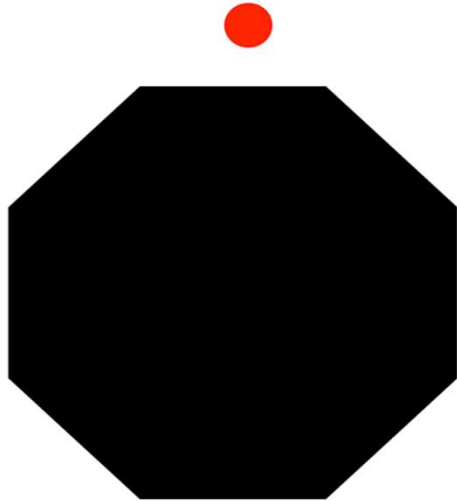

- Inter-human relations
- The will to dare
- Strength/ personal power
- Others influence on oneself
- Courage
- Targeted
- Nourishment/nurturing area
- Relationship to one's partner
- The will to interact
- Co-operation

# Super Ego

- Coordinates 337,5°-22,5° bilateral
- Superior/frontal located

# Super-EGO

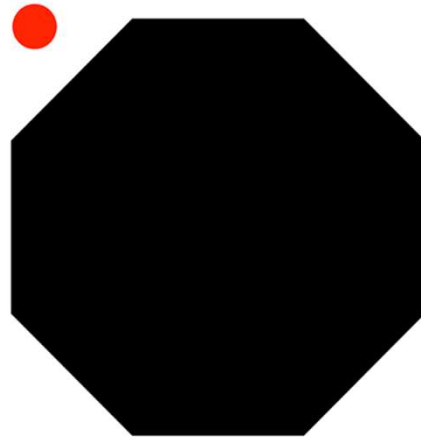

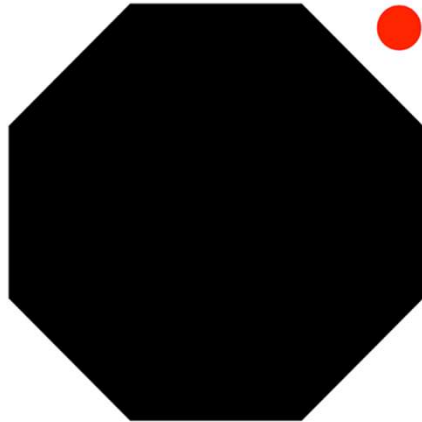

- Ideals/goals
- Society
- Moral
- Responsibility
- Feeling of pride
- Social attitude
- Rationalizing
- Analytical
- Authority

E.g., In those where we find radial furrows or hyperpigmentation in this area, we can assume the person will not act rationally.

# Religion

- Coordinates  $22,5^{\circ}$ - $67,5^{\circ}$
- Upper nasal

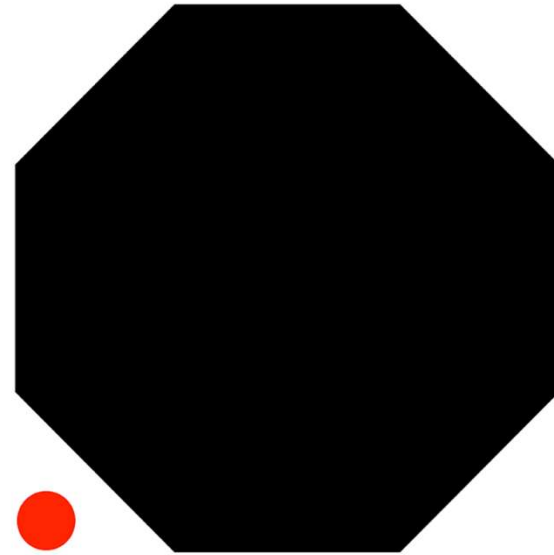

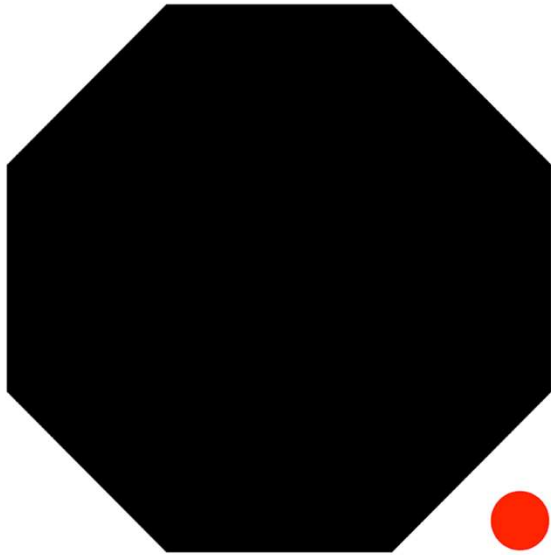

# Religion

- Religion
- Dogma
- Relation between good and evil
- Faith
- Religiousness
- Fanaticism
- Conflict because of ideals in the partnership
- To not feel supported by the other parties' beliefs.

# Cosmic Energy

- Coordinates  $112,5^{\circ}$ - $157,5^{\circ}$
- Lower nasal

## Cosmic energy

Acceptance or non-acceptance  
by environmental factors

Limitations from environmental  
forces

Inability to connect with Cosmos

Collective mind

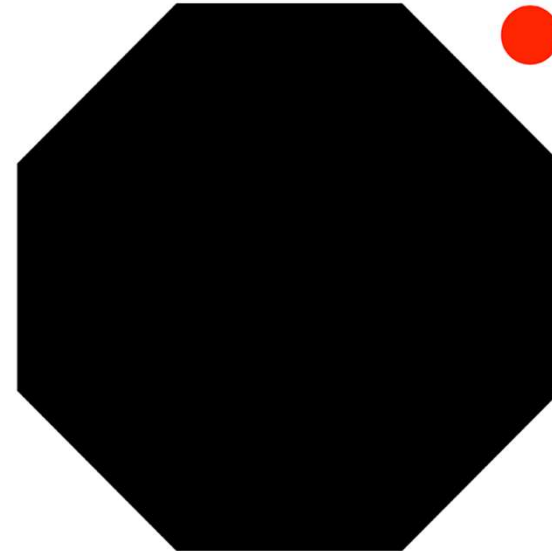

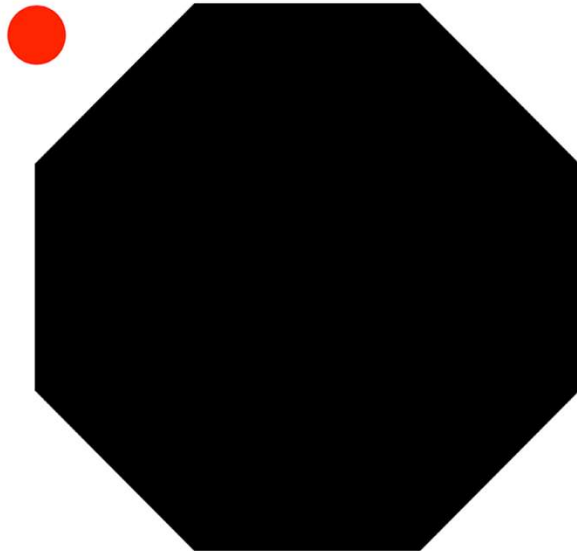

Transgenerational information

If pupil deformation in this area, we  
can expect to find tiredness and  
unease which disappear if there's a  
change of environment.

# Family

- Coordinates  $292,5^{\circ}$ - $337,5^{\circ}$  and  $22,5$ - $67,5^{\circ}$
- Upper temporal

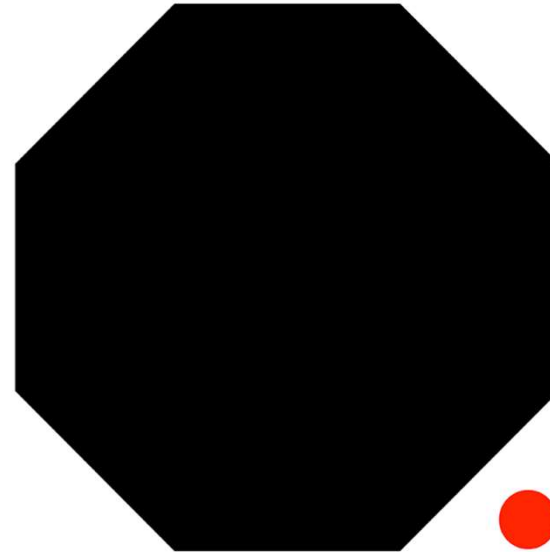

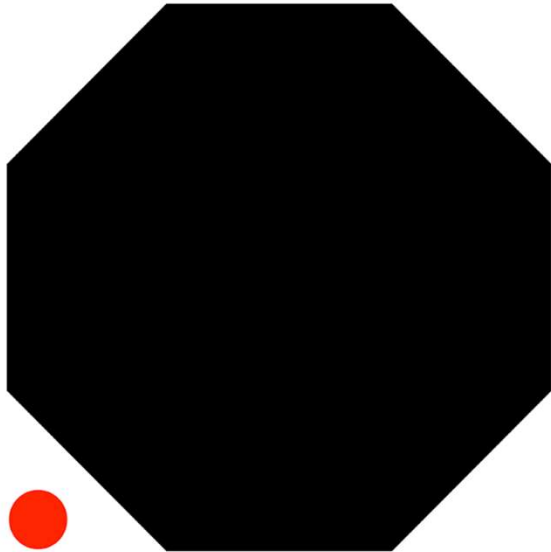

# Family

- Relationship to parents
- Conflicts or not
- Overly close to people- excessive attachment
- Love and idealization of parents
- Family ideals

# Pleasure

- Coordinates  $202,5^{\circ}$ - $247,5^{\circ}$  -  $112,5^{\circ}$ - $157,5^{\circ}$
- Lower temporal

# Pleasure

- Not feeling satisfied
- Satisfaction being in balance with oneself.
- Limitations in satisfaction and how to get there.
