

ZIVA360 Assessment Tool

What's Your Body Trying to Tell You?

With so many nutritional supplements on the market today, it is hard to differentiate between what is beneficial and what is just plain "hype". From week to week, you can find ads and breaking news on weight loss cures to secret anti-aging formulas. In addition, each person has specific nutritional needs based on genetic predispositions, dietary choices, and environmental exposures. With all of these factors taken into consideration, how can we truly know which combination of supplementation can best help us reach our optimal health standards?

ZIVA360 is proud to present the Z3BIO that uses two types of biofeedback - Heart Rate Variability and Galvanic Skin Response - to assess your clients' body systems balance.

Biofeedback is technology that is accepted and utilized in many medical practices: from neurological studies of the brain to cardiology studies of the heart; from respiratory studies of the lungs to muscular reactivity studies. You now have that technology available to help determine which nutritional supplements best match your physiology support needs!

By purchasing Ziva 360, you are opening the means to quickly and accurately identify optimal nutritional support needs in a non-invasive manner. By first identifying the stressed areas of concern, the system will then pinpoint and match which specific nutrients are most supportive. Our system will even match and list the product line within your place of business! It will scan as many products lines as you wish. Why waste time guessing which supplements to use? By using the Ziva360 your body's responses will choose the correct supplements for your specific needs. Once a report has been generated, it is sent to a designated email address as an easy-to-understand PDF file that can be printed, saved, or forwarded. Go to <http://www.ziva360.com/#!samples> to see the sample reports.

Ziva 360 currently has 3 devices, Health and Nutrition, Spa and Salon and Sports and Fitness. They will soon be coming out with a device to test animals.
