
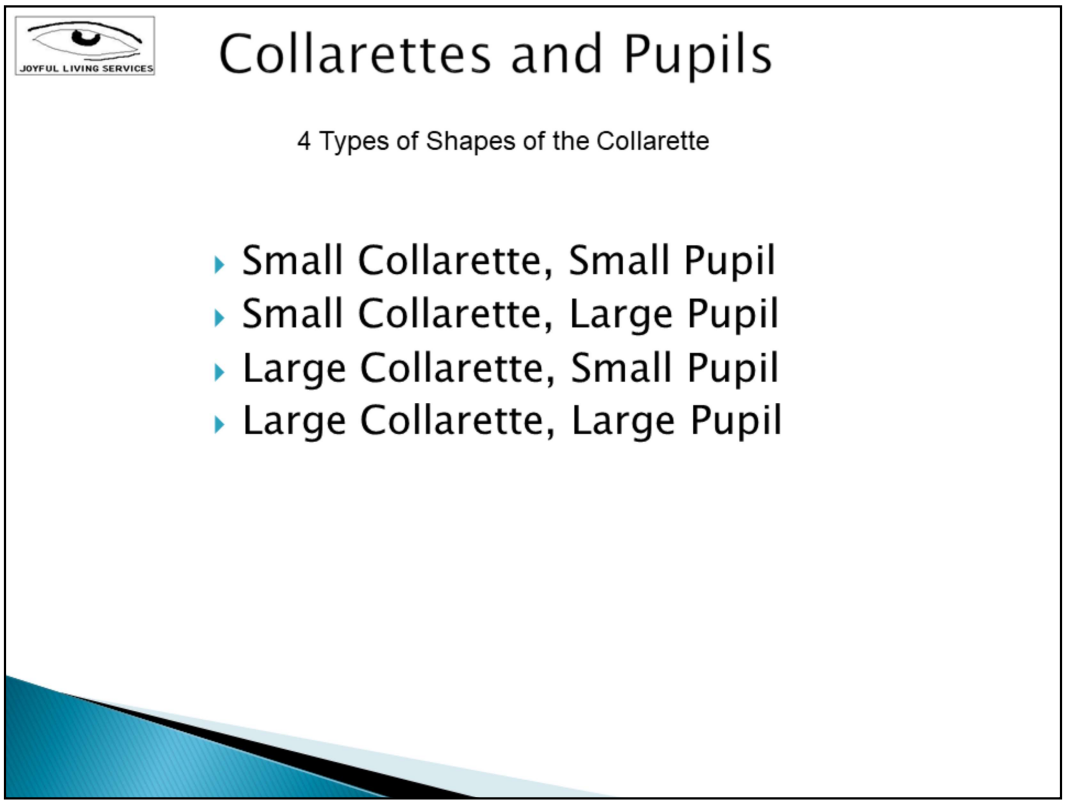
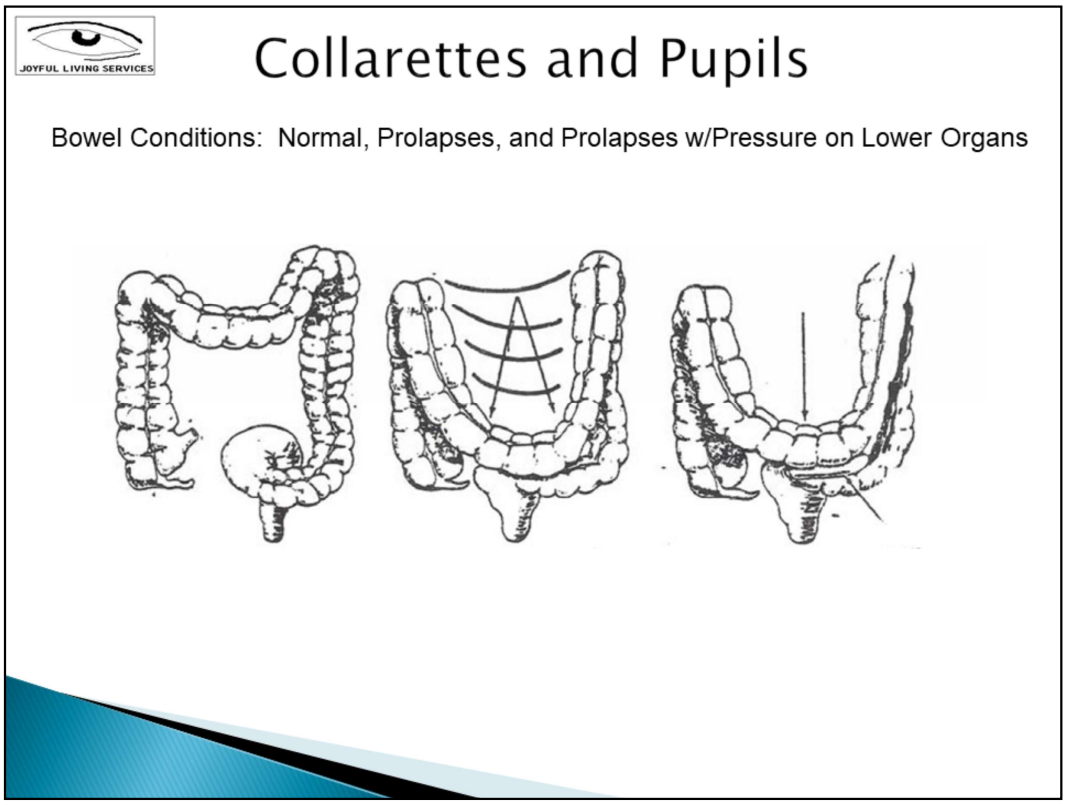
Welcome everyone!



4 Types of Shapes of the Collarette

1. Small Collarette, Small Pupil
2. Small Collarette, Large Pupil
3. Large Collarette, Large Pupil
4. Large Collarette, Large Pupil



Bowel Conditions

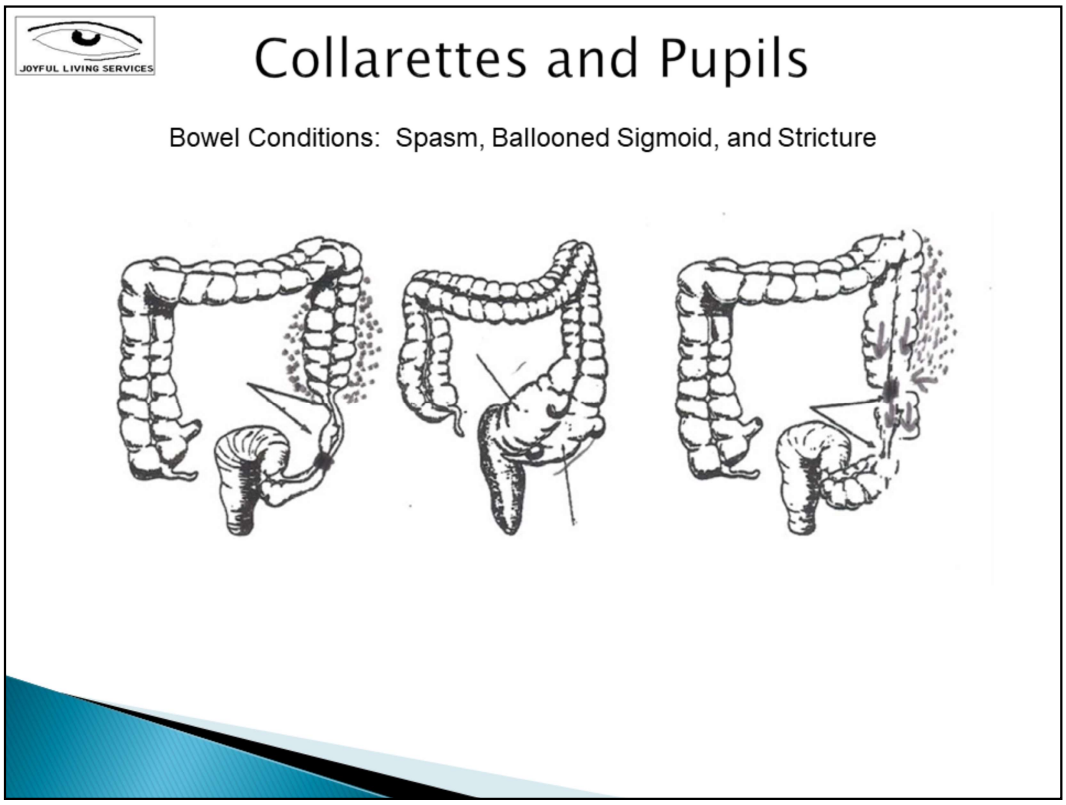
1. Normal Bowel
2. Prolapses - Collarette with Frontal Indentation
3. Prolapses w/Pressure on Lower Organs – Collarette with Frontal Indentation

If a person does have a prolapsed transverse colon it can cause many physical problems and symptoms:

1. Pull on the stomach causing it to form into a fishhook shape at the bottom creating a cramped space where acids will pool and collect. Burning sensation in the stomach, possible acid reflux, or ulcers.
2. Colon will press on the bladder causing frequent urination.
3. Colon can put pressure on the ovaries in women causing menstrual cramping.
4. Colon can put pressure on the prostate in men causing frequent urination.
5. Gas, bloating, cramping may occur. Peristalsis may be sluggish.

Questions to ask your client if this sign is seen:

1. Do you have abdominal cramping or pain?
2. Do you have stomach acids?
3. Do you have abdominal bloating?
4. Do you have constipation?
5. Do you have frequent urination?
6. Do you have cramping with ovulation or menstruation?
7. Do you have headaches?



Bowel Conditions

Spasm – Constricted

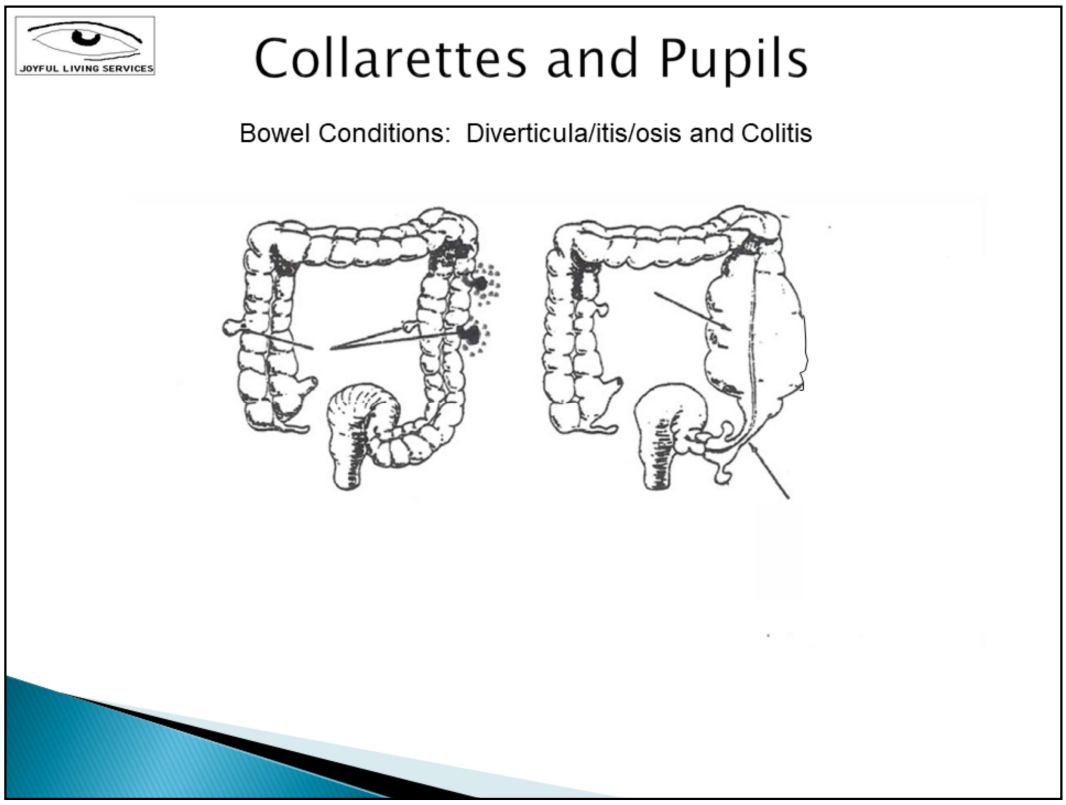
1. The constricted collarette/wreath is very close to the pupil with little space between the pupil and the collarette.
2. Physically these people tend to have bowel strictures or tight narrow areas of the colon that constrict bowel flow, causing constipation.

Ballooned Sigmoid – Atonic

1. The atonic collarette/wreath lacks tone. It is distended far out from the pupil and appears quite huge compared to the constricted wreath.
2. Physically the person with a distended collarette is often constipated because the colon tends to lack tone and hold a lot of waste. Peristalsis or bowel movement is very sluggish.
3. Without proper diet their abdomens can become distended and may even appear swollen. Because the colon lacks tone, it can become ballooned in areas. Ballooned areas of the colon are like cesspools of stagnant old toxic material where parasites, bacteria, yeast, and fungal forms colonize.

Stricture – Constricted

1. The constricted collarette/wreath is very close to the pupil with little space between the pupil and the collarette.
2. Physically these people tend to have bowel strictures or tight narrow areas of the colon that constrict bowel flow, causing constipation.
3. Constricted

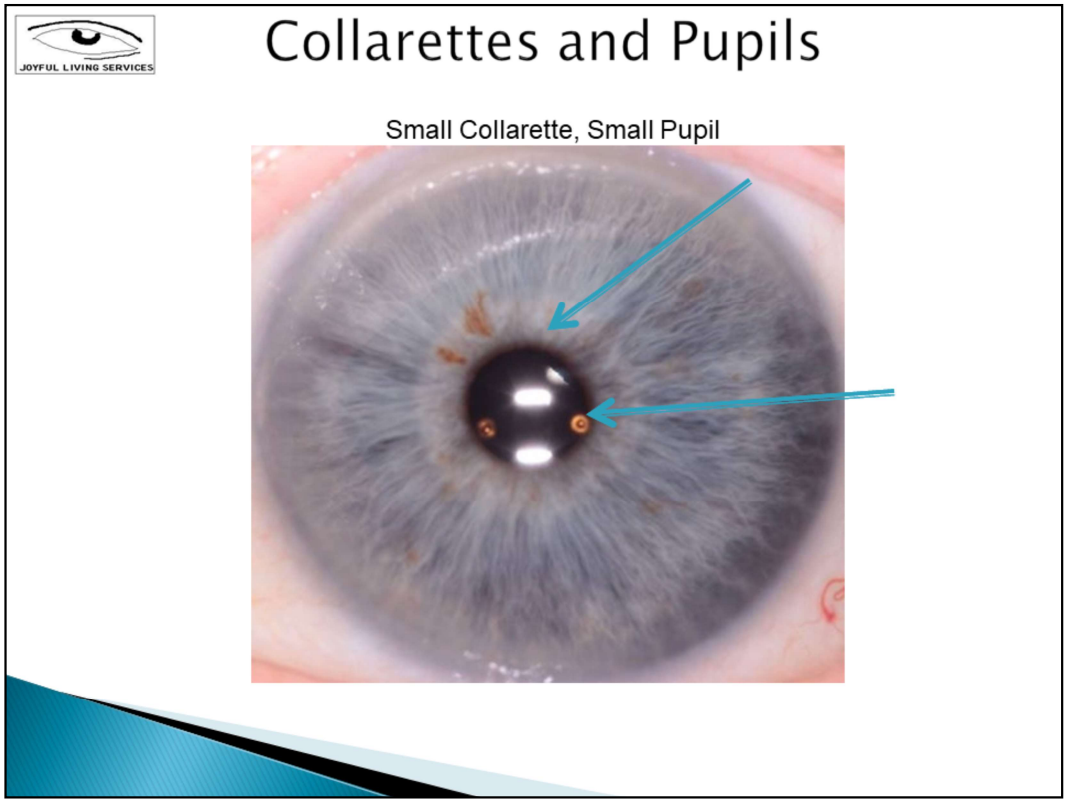


Diverticula/itis/osis: Collarette Crypts

1. Very small lacuna, often rhomboid in shape (a quadrilateral of which only the opposite sides and angles are equal) and are deep and very dark inside. The darker the crypt, the more serious the potential condition, especially in vital organ reaction fields such as the heart.

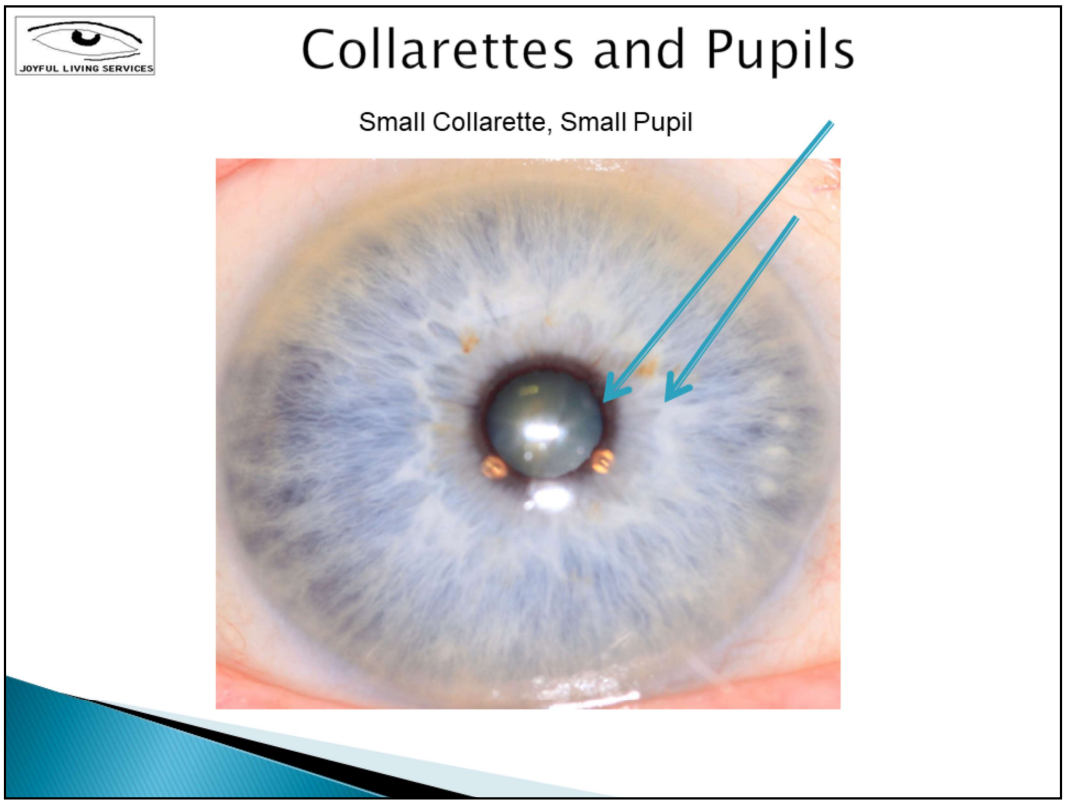
Colitis: Atonic, Constricted, Thick and Ropey, Jagged or Star Shaped

1. This collarette is ropey and appears raised can demonstrate a tendency for excessive nerve energy to the intestinal tract.
2. Physically they tend to have excessive nerve energy in the bowel causing an over active digestive tract with cramping and diarrhea. Children complain of stomach cramps and babies often suffer from colic.
3. The atonic collarette/wreath lacks tone. It is distended far out from the pupil and appears quite huge compared to the constricted wreath.
4. Physically the person with a distended collarette is often constipated because the colon tends to lack tone and hold a lot of waste. Peristalsis or bowel movement is very sluggish.
5. Without proper diet their abdomens can become distended and may even appear swollen. Because the colon lacks tone, it can become ballooned in areas. Ballooned areas of the colon are like cesspools of stagnant old toxic material where parasites, bacteria, yeast, and fungal forms colonize
6. Physically these people tend to have bowel strictures or tight narrow areas of the colon that constrict bowel flow, causing constipation.
7. Diarrhea may often worsen under extreme stress because there are often strictures in the bowel with tendencies for inflammation throughout the intestinal tract.
8. Tend to have a lot of intestinal cramping and flatulence.



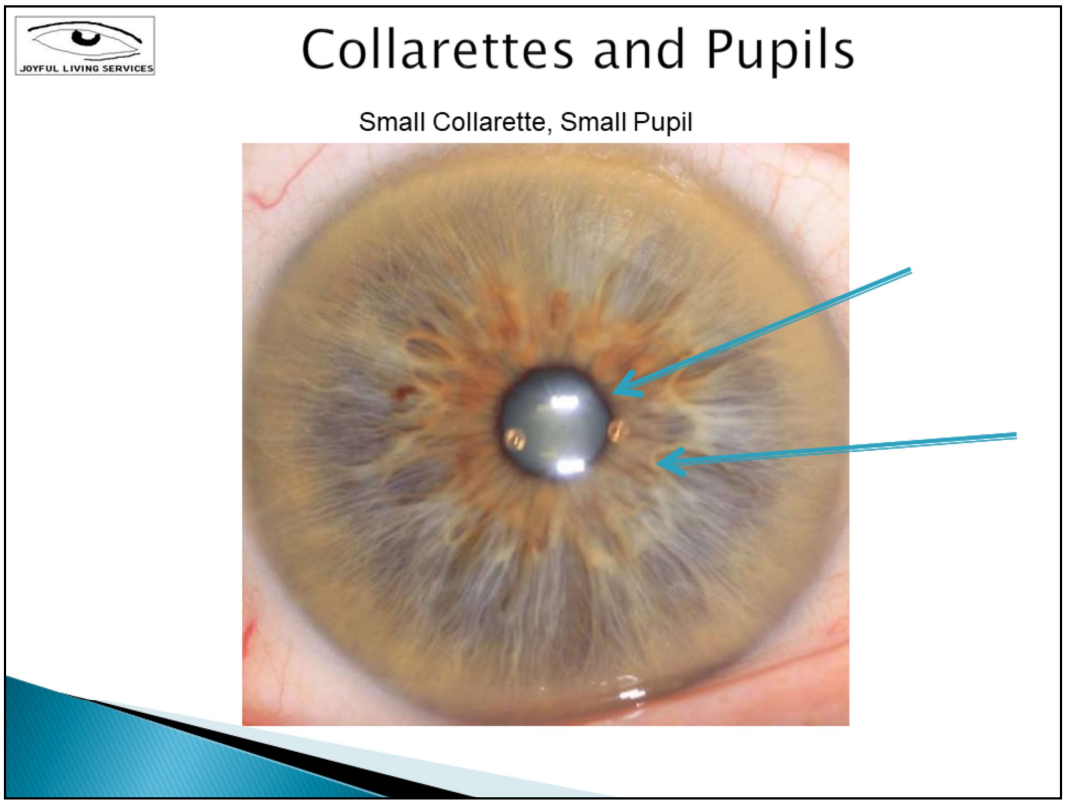
Small Collarette, Small Pupil

- Seen in all iris colors
- Good metabolism
- Good energy levels
- Naturally High Achievers
- High expectation of others
- Small frequent meals suits this type



Small Collarette, Small Pupil

- Seen in all iris colors
- Good metabolism
- Good energy levels
- Naturally High Achievers
- High expectation of others
- Small frequent meals suits this type



Small Collarette, Small Pupil

- Seen in all iris colors
- Good metabolism
- Good energy levels
- Naturally High Achievers
- High expectation of others
- Small frequent meals suits this type

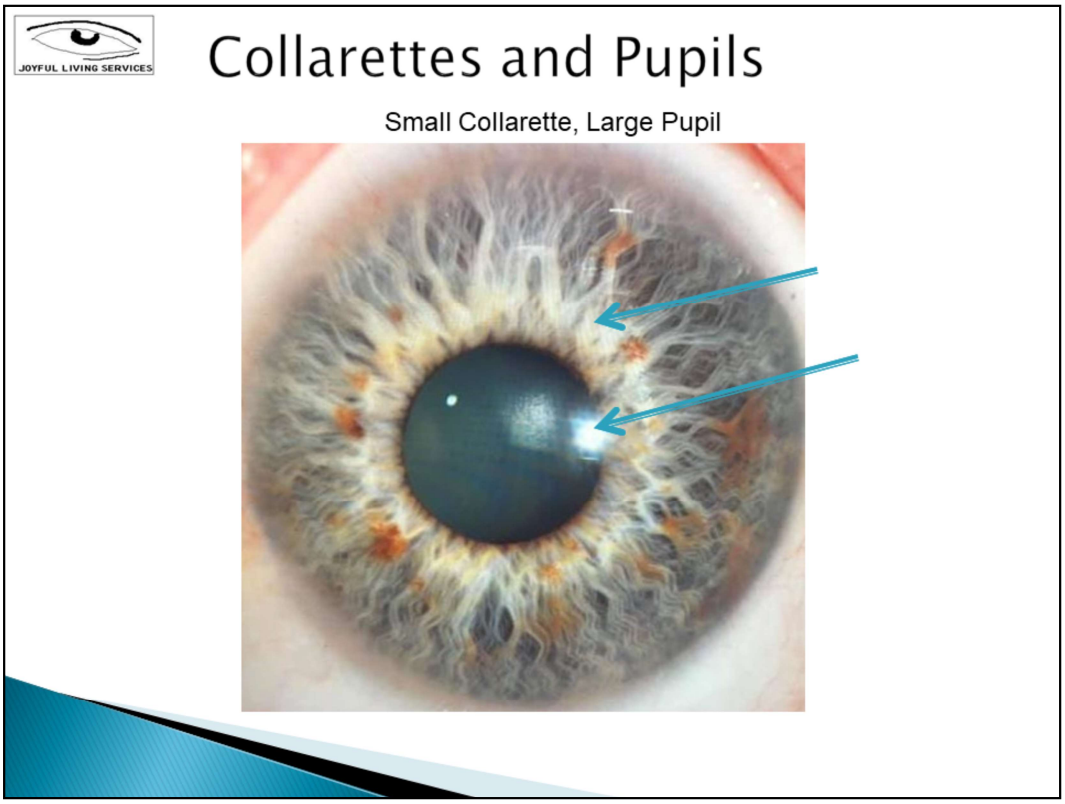
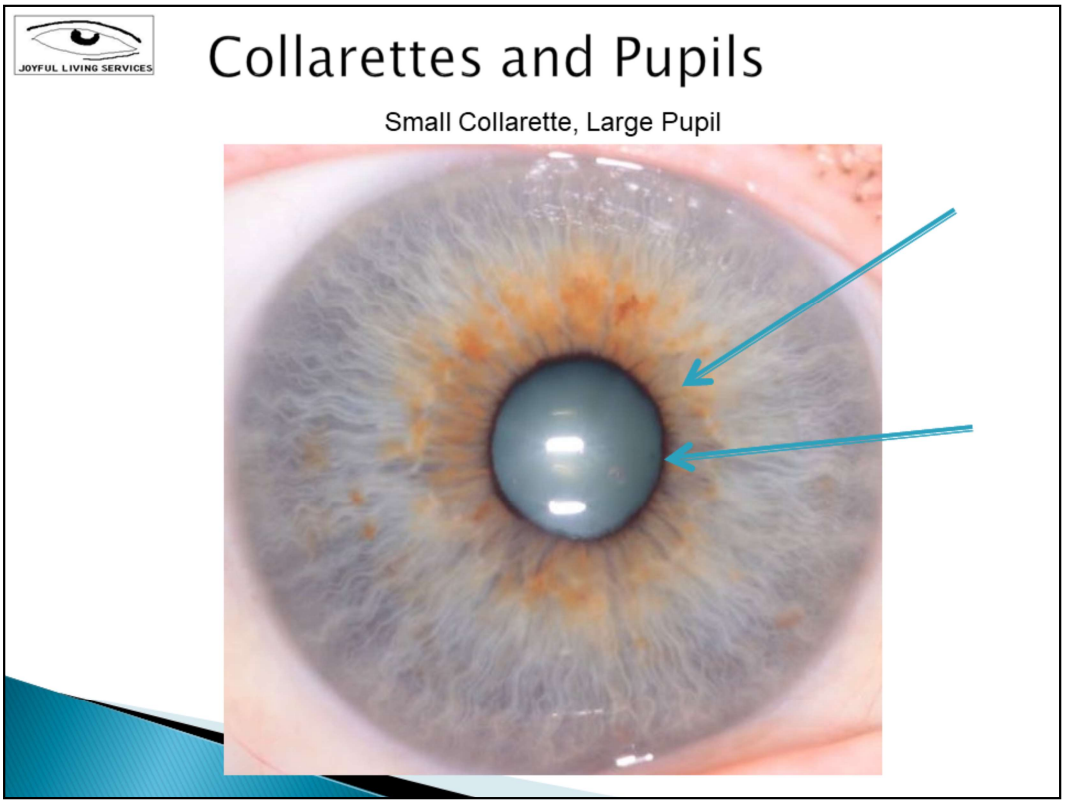
Small Collarette, Large Pupil

- Seen in all iris colors
- Slow metabolism
- Lacks energy/needs protein
- Difficulty with absorption of nutrients
- Produces large amount of waste
- Need for small meals



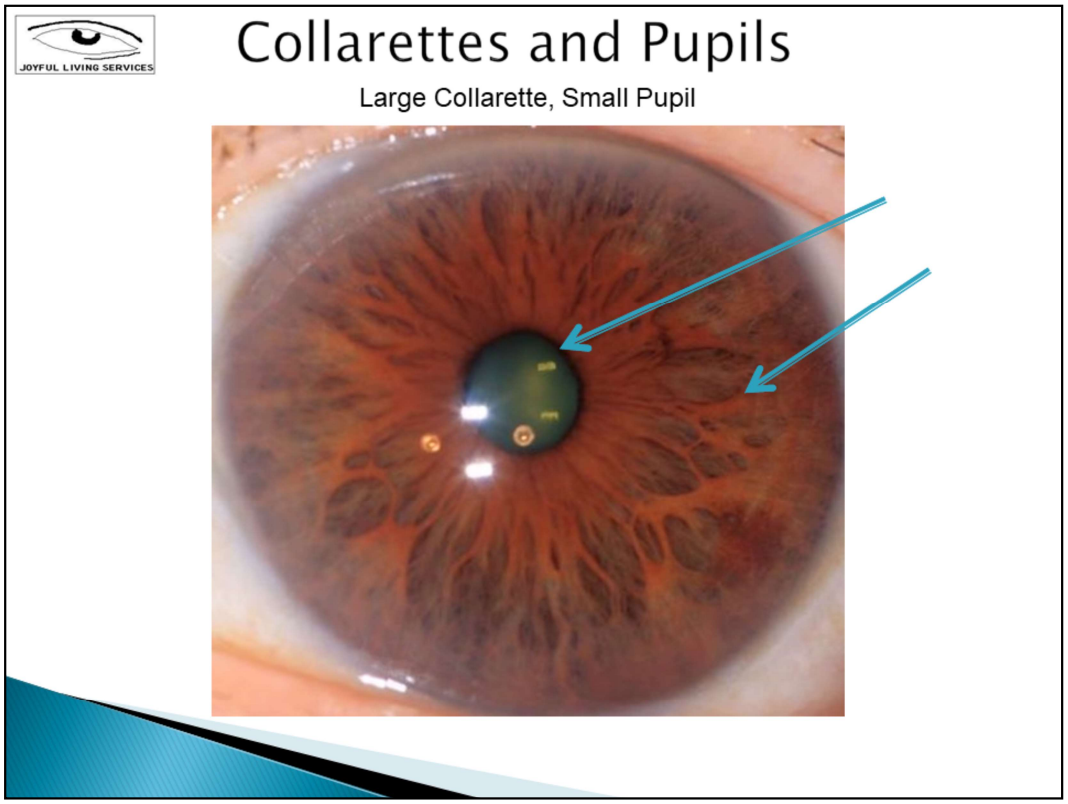
Small Collarette, Large Pupil

- Seen in all iris colors
- Slow metabolism
- Lacks energy/needs protein
- Difficulty with absorption of nutrients
- Produces large amount of waste
- Need for small meals



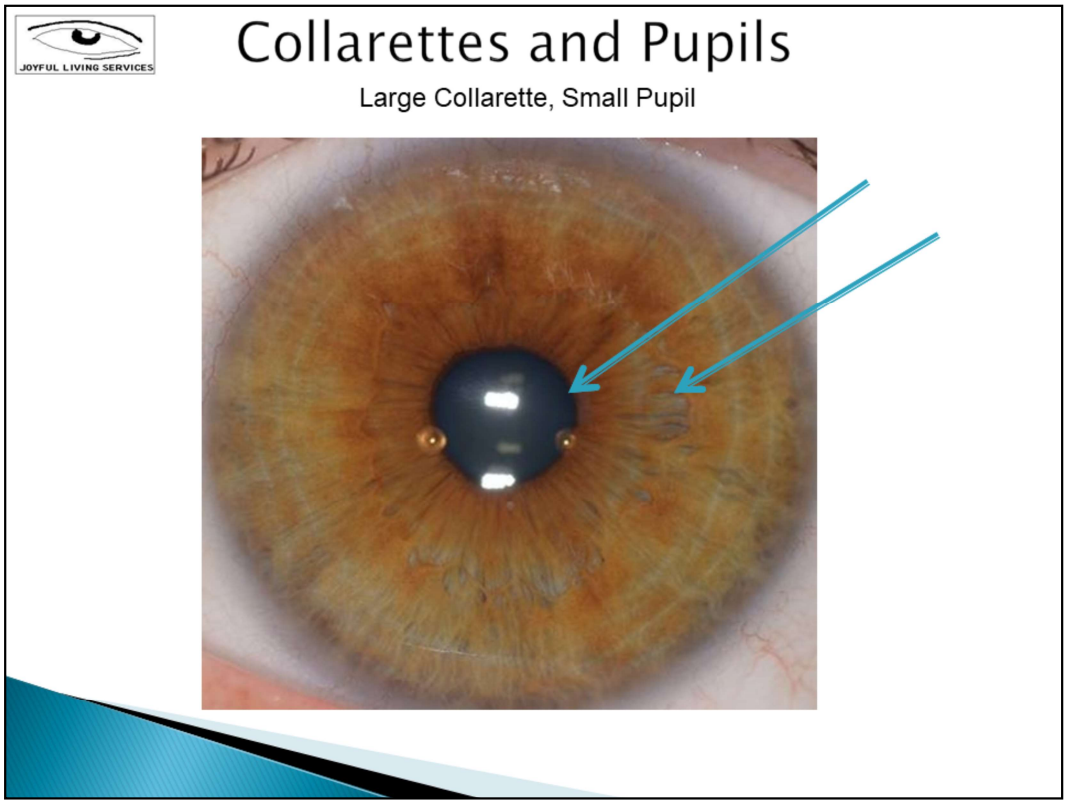
Small Collarette, Large Pupil

- Seen in all iris colors
- Slow metabolism
- Lacks energy/needs protein
- Difficulty with absorption of nutrients
- Produces large amount of waste
- Need for small meals



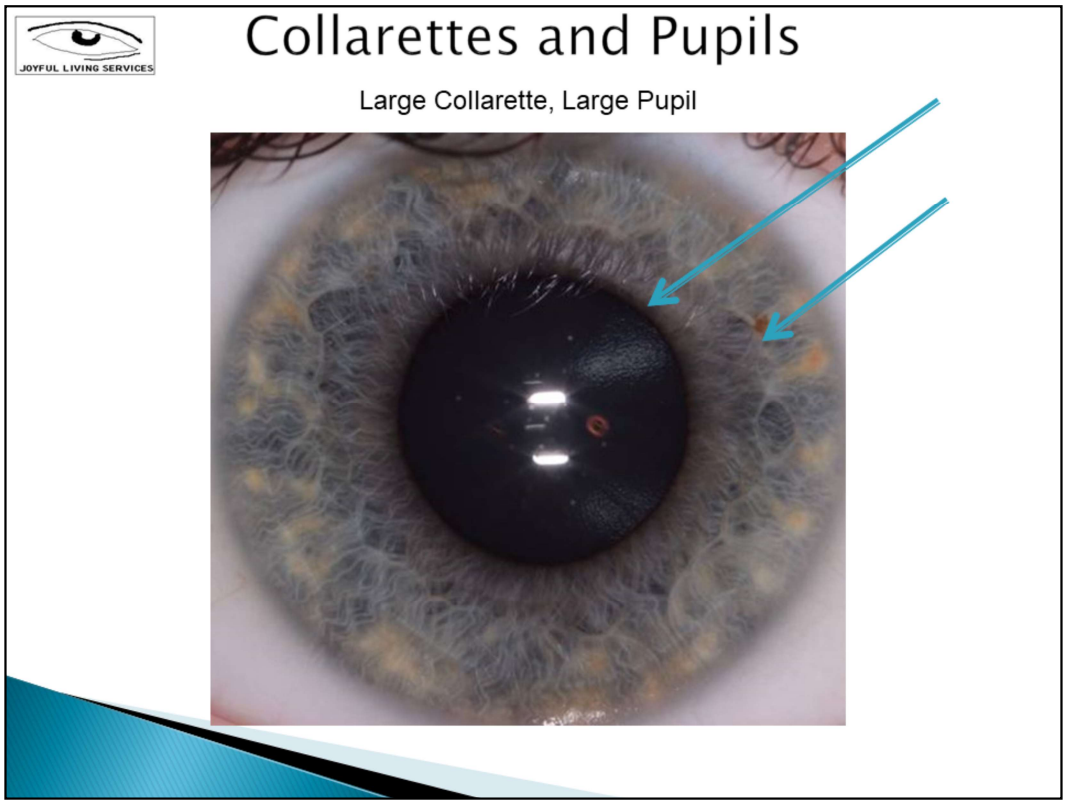
Large Collarette, Small Pupil

- Seen in all iris colors
- Poor peristaltic action
- Outgoing in nature
- Exhibit a marked changeability
- Desire for much food
- As they age may have a “pot belly”
- Hard time eliminating wastes
- Great drive or intentions w/very little follow through



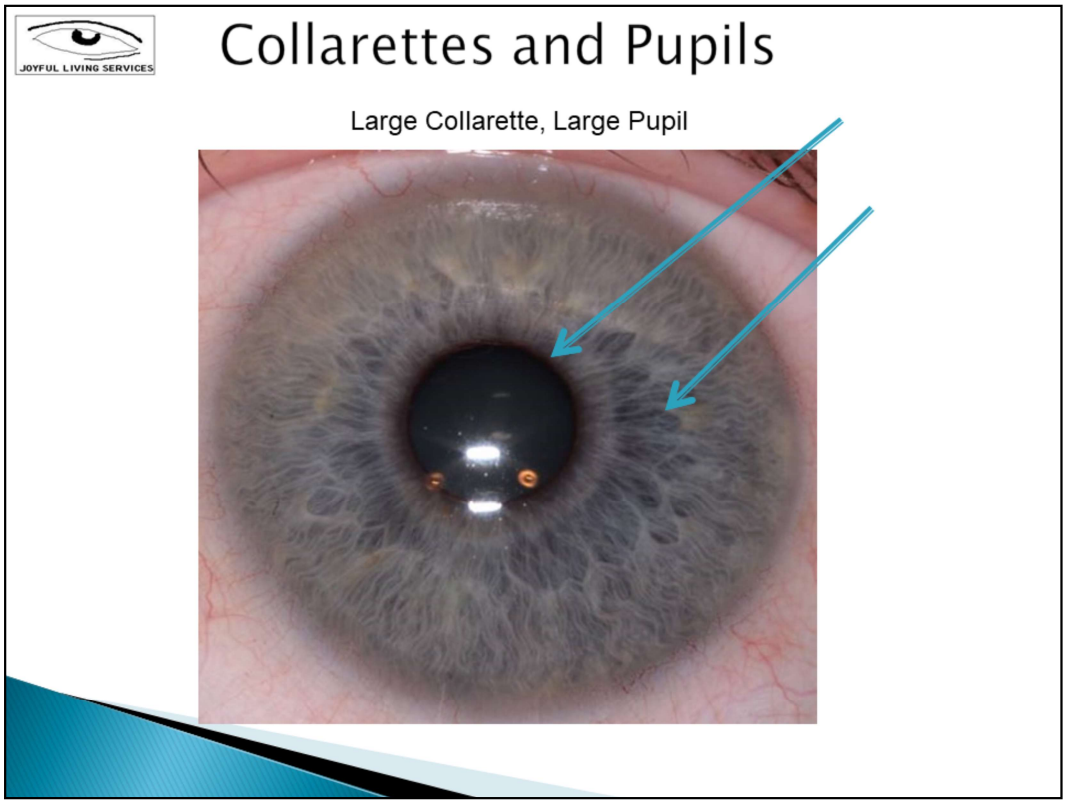
Large Collarette, Small Pupil

- Seen in all iris colors
- Poor peristaltic action
- Outgoing in nature
- Exhibit a marked changeability
- Desire for much food
- As they age may have a “pot belly”
- Hard time eliminating wastes
- Great drive or intentions w/very little follow through



Large Collarette, Large Pupil

- Seen in all iris colors
- Consume small meals
- Digestive enzymes needed for assimilation of nutrients
- Always hungry
- Gassy or flatulent
- Slow metabolism
- Manufactures waste in excess
- Minimal energy



Large Collarette, Large Pupil

- Seen in all iris colors
- Consume small meals
- Digestive enzymes needed for assimilation of nutrients
- Always hungry
- Gassy or flatulent
- Slow metabolism
- Manufactures waste in excess
- Minimal energy
