1. **Paw Paw** - Paw Paw is a powerful formula as actually does not need to be used at a high dose. Too much will cause the nausea. Most people take 1 capsule twice daily on an empty stomach between meals. After a couple days at this, and if a person feels fine, increase to 1 capsule 4 times daily between meals.
2. **Glyconutrients** 6 a day for the first month then 4 a day after that. They will really help build the communication of the immune system.
3. **Antioxidants** like Thai-go and Defense Maintenance
4. **Nature's Noni** juice 2 tablespoons twice a day. It really helps the paw paw work better. Also builds the immune system, has natural anti-cancer properties.
5. **Probiotics** to balance the immune system function
6. **EFA oils** for cellular communication
7. **Vit. E, Lycopene, and selenium all very important for prostate cancer.**
8. I focus on these things for the first 6-8 weeks then get more aggressive with cancer fighting with the Immune Stimulator, Protease Enzymes.
9. **Immune Stimulator** - 1 capsule 4 times daily between meals - This formula strengthens the immune system triggering an increase in the production of natural killer cells, macrophages, T-cells, and cytokines. It also enhances perceptive ability of the immune system to recognize cancer cells.
10. **Protease Plus** - 1 capsule 2-3 times daily between meals or High Potency Protease - 1 capsule at bedtime - This formula contains protease enzymes which supports the immune system by activating macrophages and natural killer cells. Protease enzyme breaks down the outer layer of the cancer cells so the immune system can better attack the cells.
11. Steven Horn's Herbal Hour video on Cancer is very good. You can order this from his website.
