

# Is Your Body's "Plumbing" Working? Or is your body suffering from corroded "pipes," "leaks" and "clogged drainage"?

We all enjoy the convenience of modern plumbing—having hot and cold water at the turn of a tap and wastes that are flushed or drained away instantly. So, if the pipes corrode and start to leak or the drains plug up, we get the plumbing fixed right away.

Unfortunately, many people have internal "plumbing" problems that aren't getting properly fixed. We're talking about signs of "corrosion" in the urinary system, such as frequent urinary tract infections, incontinence, kidney stones, cystitis and edema. People may be taking drugs for these problems, but all too often the problems keep recurring because the drugs aren't repairing the body's "pipes," they're just treating symptoms.

This is unfortunate, because the health of the urinary system is vital to the health of the body as a

whole. Most people don't realize that problems like skin rashes and other skin problems, high blood pressure, excess weight, muscle aches and pains and even arthritis and osteoporosis may have their roots in "plumbing" problems. This is because of waste material that backs up in the system when the urinary tract isn't draining them away as it should.

Join us at this month's Herbal Hour and learn how to take care of your personal plumbing system—the kidneys and bladder—with natural remedies. We'll talk about general urinary health and how to deal with specific urinary problems like cystitis, kidney and bladder infections, incontinence, kidney stones, water retention and more. In short, we'll show you how to keep your body's "plumbing" leak free and its drains open.

***Learn how to keep your urinary "pipes" in good working order and solve common personal "plumbing" problems at this month's Herbal Hour***
