

Parasites

Understanding Colon Health

Modern Science

- With all the tools we have available, why are so many unhealthy?
- We may be living longer, but are we living healthier?
- How do we increase the quality of life?
- How have we gotten to this point of deterioration?

Parasites - The single most undiagnosed health challenge in the history of the human race

- How many people do you know that just don't feel well?
- How many do you know on prescriptions for high blood pressure, diabetes, etc?
- How many do you know with chronic fatigue?
- How many people do you know diagnosed with cancer?

Not Just a Third World Problem
They are in every country of the
world

They are OUR problem and OUR
health risk

97% of everyone in North
America has at least one form of
a parasite

What Is a Parasite?

- An organism that lives off the host (the host being US)
- They live a parallel life inside our bodies
- They feed off our energy, our own cells or the food we eat
- They even feed off the supplements we take

Why Don't We Know They Are There?

- A smart parasite lives without being detected. If it were detected it would be eradicated
- They are intelligent in their ability to survive and reproduce
- If you learn to read your body's signals you will be able to recognize their presence
- No organ is immune from their infestation

Symptoms of Parasites

- Itchy ears, nose, anus
- Sexual dysfunction
- Forgetfulness
- Slow reflexes
- Gas and bloating
- Unclear thinking
- Loss of appetite
- Increase in appetite but still feel hungry after eating
- Yellowish face
- Grinding of teeth
- Fast heartbeat
- Heart pain
- Blurry vision
- Pain in back, thighs shoulders
- Lethargy
- Numb hands
- Burning in the stomach
- Menstrual irregularity
- Drooling while sleeping
- Dry lips during the day
- Bed wetting

What Parasites Do

Eat –

- Parasites steal our nutrients and the organs do not receive tools to rebuild causing breakdown and degeneration
- Small microscopic parasites will invade joints and eat the calcium linings of your bones leading to arthritic tendencies
- They eat the myelin sheath on the nerves and impair nerve signals to and from the brain
- Parasites are a cause of diabetic tendencies and blood sugar discrepancies – they may live in the liver or intestines and live on sugar

What Parasites Do

Reproduce

- They reproduce and can live in the body for 10,20, even 30 years
- They can come from contaminated food and water
- Smaller parasites can function like bacteria moving through the bloodstream to any part of our body
- The microscopic parasites can reproduce without laying eggs
- Larger parasites lay eggs in the intestines

What Parasites Do

Secretes

- Parasites secrete lubricants, waste materials, protective liquids for warding off viruses, bacteria and other harmful organisms or secretion to help attract food
- All of these are toxins to the host that have to be detoxified
- Produce toxins the body has to handle and manufacture more enzymes to deal with putting a stress on the immune system

How This Damages Health

- Toxins from the parasite can clog the bowel
- The excess of toxins absorbed from a clogged bowel goes to the liver
- The liver is then overburdened and unable to cope
- Toxins then spill into the bloodstream
- The kidneys, lungs and skin have to become a channel of elimination and work harder to maintain balance

Is There a Test for Parasites?

- Medical tests usually come back negative
- These test only identify and diagnose only 20% of actual cases
- Tests are only available on 40-50 types of parasites (only 5% of actual parasites)
- Over 1000 species of parasites can live in your body
- Prescription drugs often drive the parasite from one area of the body to another
- If only part of the parasite is killed then it will grow back

Meet Your Tenants

Tapeworms

- Can reach lengths of 33 feet or more
- There are 3,000 to 4,000 segments in one worm
- Can produce a million eggs per day
- Causes anemia and interference of B12 uptake
- Can cause weight gain and water retention
- Comes from beef, pork and fish
- One type can come from dogs saliva

Hymenolepis Nana, adult, stained mount

Hymenolepis Nana Eggs

The scolex has four suckers and an armed rostellum.

Pinworms

- Very infectious and cause itching in the anal area
- Eggs are deposited at night and can contaminate bed linen, pajamas, etc
- Eggs are transported through the air
- Can also be found in the vulva, uterus and fallopian tubes

Male

Pinworm
Enterobius Vermicularis

Female

Whipworm

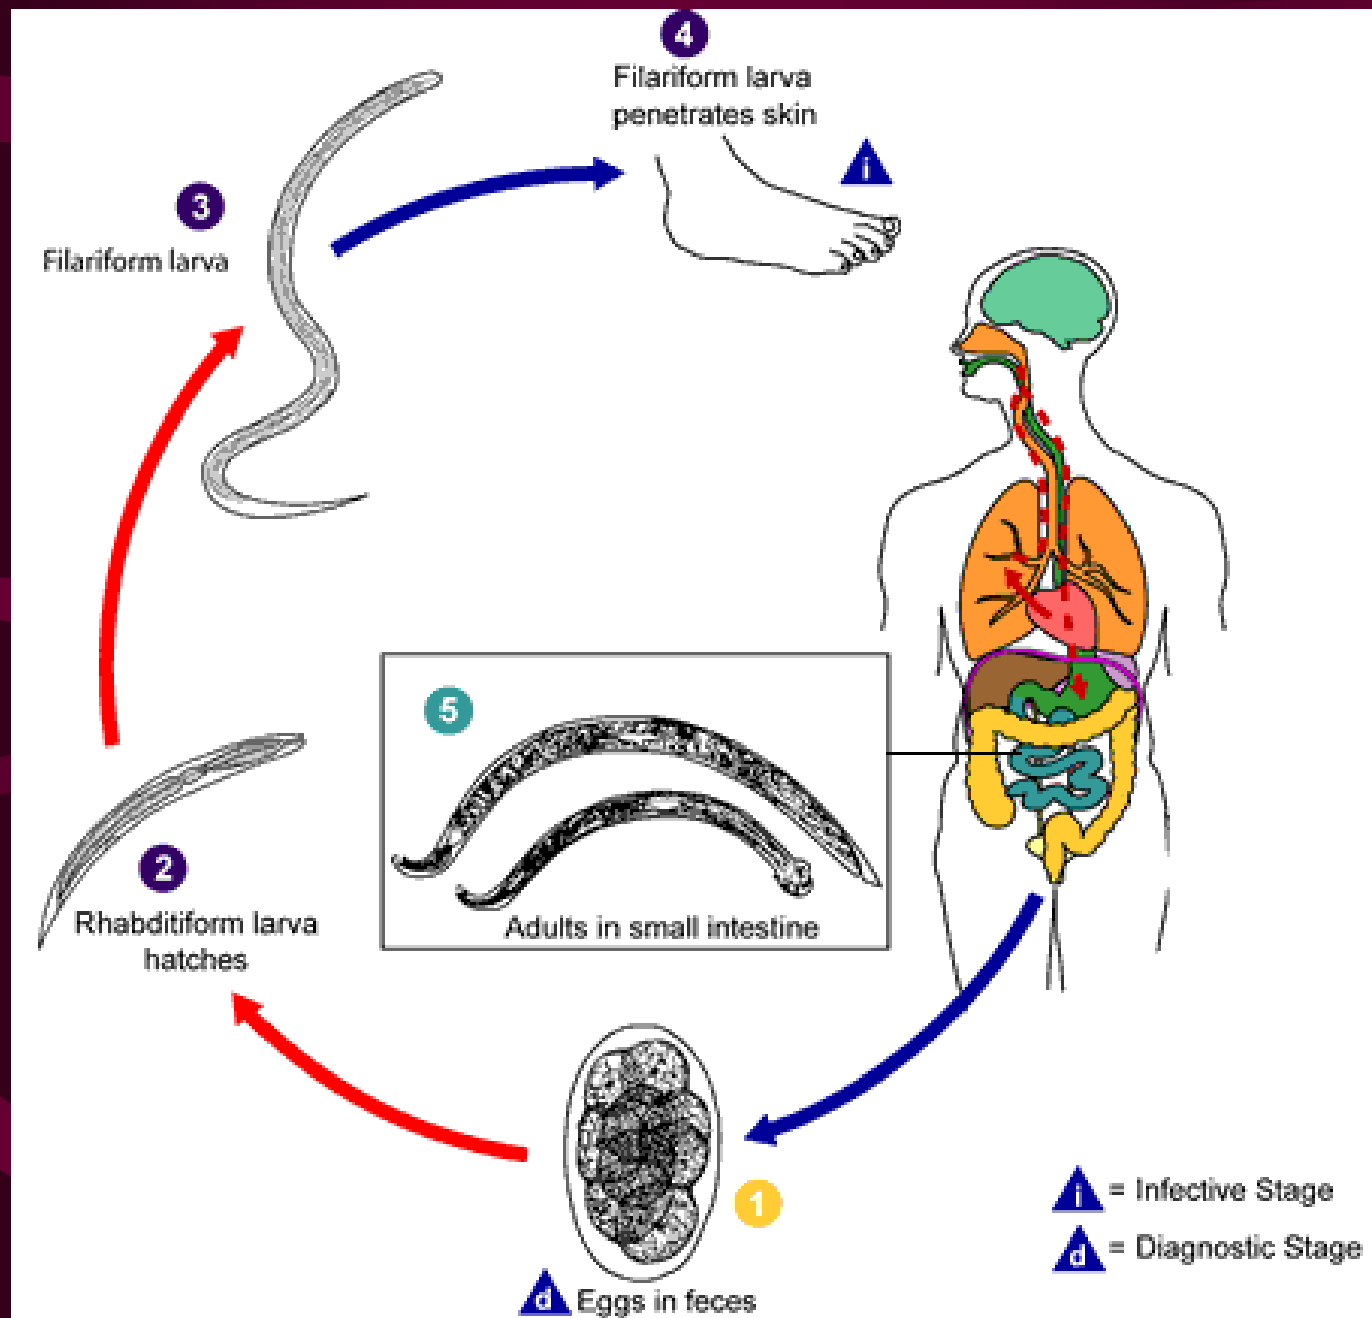

- Injects a digestive fluid which converts the colon tissue into liquid for the worms suck up
- Infects 6 billion people in the world
- Creates nutritional deficiencies and infections

Hookworms

- They bite and suck on the intestinal wall which can cause bleeding and destruction of the tissue
- Consume iron so anemia is a symptom
- Hemoglobin levels will be decreased
- Can cause death

Hookworm

Scanning electron micrograph of adult male and female *Schistosoma mansoni* (blood fluke). The adults are dioecious in that the female resides in the gynaecephoric canal of the larger male worm. *S. mansoni* causes schistosomiasis (bilharzia) and infects some 200 million people worldwide with a further 600 million living at risk from infection.

Dracunculiasis - Guinea worm disease
Dracunculus medinensis parasite

Massive Ascaris infection in child. A large bolus of roundworms expelled following anthelmintic treatment.

HEARTWORMS

Three Stages of a Parasite Cleanse

- Actual dying off of parasites
- Elimination from wherever they may be in the body
- Balancing terrain so they don't come back

Elimination

- Most parasites are microscopic
- Some can be seen in the stool or feces
- Some will hang on to the intestines with “teeth” like action to avoid being eliminated
- As they die they will be eliminated from your body
- It is crucial to keep the bowel moving while getting rid of parasites
- The parasites will decompose and toxins will be created if they aren't eliminated

Cleansing Stages

Stop Your Health From Being Robbed

- If you cannot get results with an herbal program – do a parasite cleanse
- If you have symptoms that won't go away – do a parasite cleanse
- If you have chronic, degenerative illness – do a parasite cleanse

Allergic Reaction

- Some will develop allergy type reactions during a cleanse
- This is usually an allergy to the parasite or the secretions of the parasite
- Allergy symptoms may seem worse during this time
- When a cleanse is initiated the parasite may even increase their secretions in order to protect themselves

Cleansing Symptoms

- Possible nausea or queasiness
- Increased bowel action and occasional diarrhea
- Flu like symptoms with a general feeling of malaise (yuckiness)
- Gas and belching
- Headaches
- Intestinal cramping
- Pains in joints and muscles

Step One

- Cleanse the digestive system
- Clean the villi in the small intestine
- Clear out old fecal material in the large intestine
- Clean the parasites out

This helps restore natural bowel function

Step One (cont)

- Clean out all parasites which attach themselves to the small and large intestine
- Parasites constantly absorb nutrition before our bodies are able to absorb the nutrients
- Clean the interstitial tissue to support other organs that have parasites to eliminate

Step Two

- Rebuilding is essential
- The body is constantly removing dead cells and rebuilding new ones
- When the body is toxic it rebuilds new toxic cells rather than new healthy cells
- Nutrients, antioxidants, probiotics and enzymes are essential to restore natural balance

Step Three

- Lifestyle adjustments
- No sugar
- No fruit
- No alcohol
- Limit caffeine

Positive Results of a Parasite Cleanse

- Increased energy levels
- Alertness and level thinking
- Less stress
- More flexibility in movement
- Improved hair, skin and nails
- Lack of body odor and bad breath
- Weight loss

Black Walnut

Ancient uses include the oxygenation of the blood to assist in the removal of parasites from the body. The brown stain found in the green husk contains organic iodine which has antiseptic and healing properties. It is also used to balance sugar levels and burn up excessive toxins and fatty material.

Clove

This herb contains one of the most powerful germicidal agents in the herb kingdom. It is an effective stimulant and aromatic for the lungs and stomach. It helps expel microbials and to increase blood circulation and to promote digestion and nutrition.

Pumpkin Seed

The seeds from the pumpkin have for a long time been known to contain very effective anti-parasitic properties. In fact, Native Americans were known to have chewed on pumpkin seeds as a vermifuge.

Peppermint Leaf

During its several thousand years of consistent use by diverse populations, peppermint leaf preparations have been used in both eastern and western cultures to support the gastrointestinal tract and the biliary duct digestive functions. In addition, peppermint leaf has powerful anti-parasitic properties.

Thyme Leaf

Thyme is a powerful antiseptic and tonic with curative powers. It has been used by many cultures to alleviate anemia, bronchial and intestinal problems. It acts as an antiseptic and is reported to assist in the removal of fungal infections, skin parasites, and abdominal worms.

Fennel

Acts as appetite suppressant and diuretic and helps to stabilize the nervous system and expel waste material from the body. This herb has a history of improving digestion and promoting lactation as well as aiding in the remedy of abdominal cramps, female disorders, gas, intestinal problems, nervous disorders, pinworms, and parasitic microbials.

Paw Paw

Reduces parasites ability to create life energy.
It destroys the food supply for the reproduction of the parasites. It can be used on pets.

Other Products

- All Cell Detox
- Yeast Fungal Detox
- Gastro Health
- LBS II
- Artemesia Combination

Parasite Cleansing Program

- Ten day program of Para-Cleanse with Paw Paw
- Use 3 capsules per day of Artemesia Combination for 7 days between Para-Cleanse
- Repeat this program 3 times
- Follow program with Probiotic Eleven
