

# UNIVERSAL IRIDOLOGY GRID

The **UNIVERSAL IRIDOLOGY GRID** (UIG), with human-iris-like ellipses, accepts all iris mapping and locating applications. Clock numbers plus radiating lines in 15-minute increments (at 15, 30, & 45 min. between clock #s) make marker location easy. The 1st concentric ring beyond the pupil's edge encloses Zone 1 (Z1), the stomach Zone. Zone two (Z2, bowel Zone) is demarked the Wreath. The 1st two Zones together = the "NutriZone". Zones 3-7 make up the familiar "Ciliary Zone".

**INSTRUCTIONS:** A marking at L12:15Z3 is in the left ("L") eye at the first line after 12:00 o'clock (":15") in Z3 (1st Zone outside the Wreath). The physical arterial heart is at L2:45-3Z3W, meaning it is in the left iris the space between 2:45 and 3:00 in Z3 and on the Wreath ("W"): at least some heart signs (as Josef Deck and others knew) will be found on (and on either side of) the Wreath. "R11:15-11:30Z5" means precise location is between those lines (in the right iris at Z5). "R11:00Z6" means the marking is on the 11:00 line (in the R iris, Z6).
